

IP core(Tx/Rx) for FPGA which based on CSI-2 standard
Serial Data Transfer : Camera - Application Processor

Characteristic

MIPI CSI-2(Tx/RX) I/F by FPGA

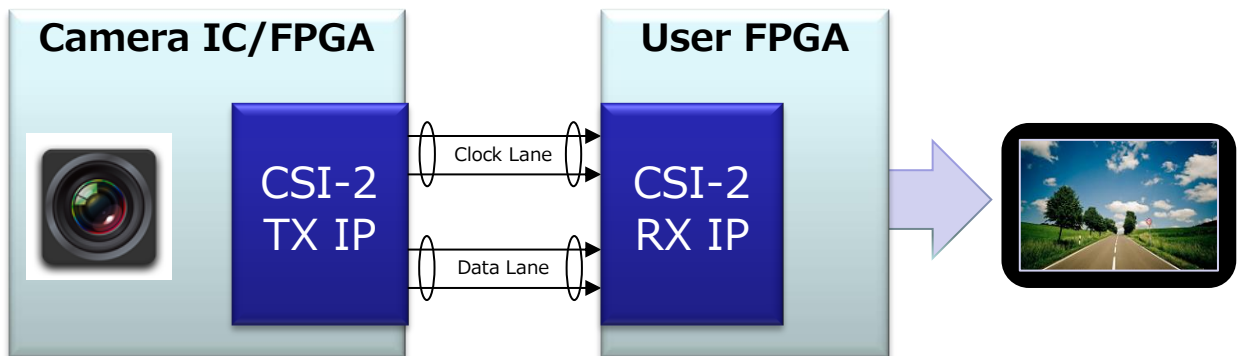

Merit of IP for
FPGA

Realize MIPI I/F with Low cost

- Series development for small quantity,
large variety
- Available for evaluation of Product development

Example of System

CSI-2 Tx : After Image processing in Camera IC, Output by MIPI CSI-2 Tx
CSI-2 Rx : Receive Camera IC data in CSI-2 Rx, Output to Display after image processing.

Customize

IP core customization according to customer needs.(User I/F, output through MIPI)
Offer only LINK Layer/PHY Layer is possible, because IP adopt PPI(Phy Protocol I/F).
